
Data Collection
1. The dataset was provided by bright learn in a CSV file
2. The dataset consists of transactional data of different product catergories from a coffee shop that has 3 stores which collect data everyday from 6am - 9pm everyday for 6 months
Data Inspection
1. Check for inconsistencies in the data, what the data contains, the data types, the nulls and the incorrect type of data.
Data Processing
1. Upload and store the CSV file on **Databricks**
2. Use **SQL** to process the data and check for which data can be used for analysis
3. Key metrics:
- Total revenue per product category
- Time intervals generating the most revenue
- Revenue by month
- Which day of the week generates the most revenue
Data visualization
1. Import the new table from **Databricks** to **Microsoft Excel**
2. Create **pivot tables** and **graphs** to summarise the data group/aggregated data
3. Create dashboards using **Power BI, Data Studio & Lovable** to finally visualize the findings and prepare it for presentation
Presentation to stakeholders:
1. Gather the visualizations and findings from the data and present the insights to support decision making.
2. Use **PowerPoint presentation** to present the findings. Key metrics must be clearly shown and presented with recommendations.
